

HITEX READY FENCE

A versatile, easy to install, cost effective answer to your fencing needs. The Hitex Ready Fence system is based on a standard 14g galvanised steel post and 2.7m long reinforced & plastered blocks (90mm thick, 600mm wide) providing options of 600, 1200 or 1800mm high.

To further enhance your Hitex Ready Fence simply add pillar bands & caps (& other mouldings as desired).

PANEL OPTIONS	DIMENSIONS	DESCRIPTION	PART NO.
	600mm high 90mm thick 2.7m long	Mesh reinforced both sides and backwrap to top edge. (Ends & bottom plain)	RFM1
	600mm high 90mm thick 2.7m long	As per RFM1 plus one plaster coat.	RFP2
	600mm high 90mm thick 2.7m long	Mesh reinforced both sides, one plaster coat, chamfered corners and backwrap to top & bottom edges. (Ends plain)	RFPC3
	600mm high 90mm thick 2.7m long	As per RFPC3 plus a flat finish coat, unpainted. Prefinished Panel	RFF4

How to Install

Hitex Ready Fence is easily installed by a competent home handyman or your Hitex registered applicator.

Provided that your ready fence posts are consistently spaced, plumbed and set in concrete, the ready fence panels simply drop in to place. The base can be finished with a concrete mowing strip (providing further anchorage) Panels are supplied pre-finished unpainted or factory reinforced and, once installed your plasterer then applies the skim & finishing coats on site.
